The invention relates to an isolated lung cancer related polypeptide its covariants, allelic variants or homologues. The polypeptide and its nucleic acid are useful for preventing, treating, or ameliorating a medical condition in a mammalian subject, for diagnosing a pathological condition (c) or a susceptibility to a pathological condition in the nucleic acid or determining the presence or absence of mutation in the nucleic acid or condition in the polypeptide in a biological condition and diagnosing a pathological condition based on the complex of the polypeptide or the polypeptide and diagnosing a pathological condition based on the complex of the polypeptide or the polypeptide are useful for detecting, treating, preventing and/or prognosing diagorders of the lung, such as small cell lung cancer, non-cell carcinoma, adenocquamous cell carcinoma, adenocarcinoma, cell carcinoma or lung cancer metastasis. The polypeptide, its antibodies or its polynucleotide are also useful for detecting, treating, preventing and/or prognosing diagorders syndrome; hyperproliferative disorders e.g. and/or prognosing respiratory disorders e.g. non-allergic rhinitis and cancer metastasis. The polypeptide, its antibodies or its polynucleotide are also useful for detecting, treating, preventing candult respiratory disorders e.g. non-allergic rhinitis and candult respiratory disorders e.g. non-allergic rhinitis and candult respiratory disorders e.g. non-allergic rhinitis and candult respiratory disorders e.g. anaphylaxis and asthma; concerns and leukopenia; allergic reactions; however allergic rhinitis and disorders e.g. anaphylaxis and asthma; concerns and leukopenia; allergic reactions e.g. anaphylaxis and asthma; concerns and secondary of the polypeptide and sorders e.g. anaphylaxis and kidney failure; cardiovascular disorders e.g. arrhythmia and myocardial inflammatory disorders e.g. arrhythmia and myocardial inflammatory disorders e.g. arrhythmia and myocardial system disorders e.g. Aldison's concerns and concerns and concerns a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21-SEP-2000

```
(ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, altergies, autoimmune hammend and their face multiple sclerosis, rheumatoid arthritis and ulcerative colities, (c) cardiovascular disorders uch as myocardial ischaemias; (d) wound healing; (e) neurological disease e.g. cerebral anoxia and epilepsy, and (f) infectious diseases such as viral, bacterial, fungal and parasitic infectious.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamalytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                           Sequence 32174 BP; 8747 A; 7064 C; 6837
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 11808; 1701pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     31.1%;
```

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing, (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. Sequence 32174 BP; 8747 A; 7064 C; 6837 G; 8001 T; 1525 other; GGTGGCCTGTGCGGGACTGGTGCAGAAACTACTCGTCTCCCTTTTCACAGCACTCCTTTG GATTACAGGCGTGAGCCACCGTGCCCGGCCCAAAGGGGAAACTCTTTGTGGGAGGAGCAGA CACCATGCCCAGCTAATTTTTGTATTTTCAGTAGAAACGGGATTTCACCACGTTGGCCA CCCCAGAGCAGAGAATGGAAAAGCCAGGGAGGTGGAAGATCGATGCTTCCAGCTGTGCCT CCCCAGAGCAGAAATGGAAAAGCCAGGGAGGTGGAAGATCGATGCTTCCAGCTGTGCCT CAGGAATCTATTGTGTTTTTTCTTCTGCCAATTTACTATGATTGTGTGTATGTGCCGCTACCA GGGGCTCACATCTCCCCCTCTGATTCCCCCCATGCACATTGCCCTTATCTCTCCCCCATCTAGC GATTACAGGCGTGAGCCACCGTGCCCGGCCCAAAGGGGAAACTCTTGTGGGAAGGAGCAGA CTCCTGGGTTCAAGTGATTTTCCTGCCTCAGCCTCCCAAGTAGCTGGGAATACAGGCACG CTTGCTTTGTCACCCACGCTGGAATGCAGTGGCGGGATCTCAGCTCACCGCAACCTCCAC GGTGGCCTGTGCGGGACTGGTGCAGAAACTACTCGTCTCCCTTTTCACAGCACTCCTTTG CAGGAATCTATTGTGTTTTTCTTCTGCCAATTTACTATGATTGTGTATGTGCCGCTACCA GGGGCTCACATCTCCCCTCTGATTCCCCCCATGCACATTGCCTTATCTCTCCCCCATCTAGC GGCTGGTCTCGAACTCCTGACCGCAAGTGATCCACCCGCCTCCGCCTCCCAAAGTGCTGG GGCTGGTCTCGAACTCCTGACCGCAAGTGATCCACCCGCCTCCGCCTCCCAAAGTGCTGG CCACCATGCCCAGCTAATTTTTGTATTTTCAGTAGAAACGGGATTTCACCACGTTGGCCA 1912 CTCCTGGGTTCAAGTGATTTTCCTGCCTCAGCCTCCCAAGTAGCTGGGAATACAGGCACG CTTGCTTTGTCACCCACGCTGGAATGCAGTGGCGGGATCTCAGCTCACCGCAACCTCCAC Score 708; DB 22; ; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases

Sequence 1135, Application US/09764860
Patent No. US20020094953A1
GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE: OF INVENTION: Nucleic Acids, Proteins, and FILE REFERENCE: PC008
CURRENT APPLICATION NUMBER: US/09/764,860
CURRENT FLING DATE: 2001-01-17
Prior application data removed - consult PALM or NUMBER: OF SEQ ID NOS: 1198
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 1135
LENGTH: 7461
TYPE: DNA
ORGANISM: Homo sapiens

Sequence 4, Application US/09165868

Patent No. 6465176

GENERAL INFORMATION:
APPLICANT: Message Pharmaceuticals, Inc.
TITLE OF INVENTION: METHOD FOR IDENTIFYING COMPOUNDS
TITLE OF INVENTION: AFFECTING RNA/RNA BINDING PROTEIN INT
FILE REFERENCE: 50093/003WO1
CURRENT APPLICATION NUMBER: US/09/165,868
CURRENT FILING DATE: 1998-10-02
PRIOR APPLICATION NUMBER: PCT/US99/21672
PRIOR APPLICATION NUMBER: PCT/US99/21672
PRIOR FILING DATE: 1999-09-16
NUMBER OF SEQ ID NOS: 11
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 4
LENGTH: 1043
TYPE: RNA
CREAKING ARTIFICIAL SCREEGE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 1

PATENT NO. 6461847

PATENT NO. 6461847

GENERAL INFORMATION:
APPLICANT: YE, Jane et al.
APPLICANT: YE, Jane et al.
TITLE OF INVENTION: ISOLATED HUMAN ENZYME PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

FILLE OF INVENTION: THEREOF

FILLE REFERENCE: CL001169

CURRENT APPLICATION NUMBER: US/09/810,347

CURRENT FILING DATE: 2001-03-19

NUMBER OF SEQ ID NOS: 6

SOFTWARE: FRSTSEQ for Windows Version 4.0

SEQ ID NO
LENGTH: 42571

TYPE: DNA
ORGANISM: Human
